APTUS

CONNECTING PEOPLE

APTUS DELIVERS REAL TIME LOCATION VIA INTEGRATED BLE TECHNOLOGY

Utilising the built in BLE (Bluetooth low energy) beacon each call station provides detail of where Resident's and staff are and can report back in real time the need for assistance at a specific location or the time a staff member has spent in attendance or even if multiple staff are in attendance.

Software configured, the Alexys system is designed to provide enhanced functionality with ongoing software updates, all designed and ready to roll out as clients require.

With the latest firmware all Aptus Air and Unity call points now have double the functionality. With a simple "Over the Air" update not only can we configure the BLE beacon, but all call points are upgraded to include a long press feature, escalating a call to another level, including such valuable features as Nurse Call to Nurse Assist, Nurse Assist to Emergency etc. A long press of the cancel button enters the call point into cleaning mode, recording cleaned time, and identifying the staff member initiating the event*.

The Aptus Aware android messaging App provides improved clarity as to who, when and for how long a service was provided. All reportable, providing real, auditable data on how a facility is operating.

Resident's feel safer than ever knowing when they press their personal pendant for help, not only are they identified but their location is also provided, minimising the response time when they are in need.

Scalable to meet the needs of the facility, functionality that develops both Resident confidence and staff visibility.

Online remote diagnostics, OTA programming and Alexy's legendary 24/7 technical support are always available. Operational changes can be made simply through a web browser reducing costly and time consuming site visits by service technicians.

Delivering system updates online and without operational interruption, keeping your system current with the latest features is a fundamental concept of the Aptus solution.

Don't have Aptus yet? The time is right to upgrade, the Aptus solution provides for the latest features and functionality, including Wi-Fi, Poe (Power over Ethernet), BLE (Bluetooth Low Energy), RTLS (real time location system), Auto presence, Duress, and more.

Aptus is a truly world class solution that can, if required, be delivered one component at a time. Enabling facilities to maximise cash flow and work within budget, knowing that Alexys can refurbish one room, one wing or an entire facility at your pace, putting an end to the expensive all-encompassing upgrades that the industry has endured for decades.

The Aptus solution utilises the highly resilient Zero Trust Architecture (ZTA) to minimise the risk of malicious cyber security attacks, making it best of breed whether it be Wi-Fi or PoE, we are delivering tomorrow's technology today.

*In conjunction with Aptus Aware mobile APP
